

Brand guidelines

How the VEYRO identity is built, and the rules that keep it consistent wherever it turns up.

● VERSION 2.0 — INTERNAL DOCUMENT

What VEYRO is

VEYRO builds websites for local businesses — barbers, salons, takeaways, butchers, cafés — around Wideopen, Gosforth, Killingworth and the wider North East, and remotely for anyone in the UK.

The people we sell to have usually been quoted £2,000 by a “proper” agency and decided websites aren’t for people like them. So the single most important job this brand has is to **not look expensive or intimidating**. Warm, plain, competent, local. It should feel like a good tradesperson, not a design consultancy.

Warm

Cream, not white.
Rounded, not sharp.
Approachable before it
is impressive.

Plain

Prices on the page. No
jargon. Nothing that
needs decoding.

Local

Town names, a real
phone number, a real
person. Proximity is
the advantage — say it
everywhere.

The failure mode for this brand is looking too good. If a design decision makes VEYRO feel like a London agency, it is the wrong decision — however nice it looks.

The mark

An asymmetric V. The right arm overshoots the point where a V would normally stop and keeps climbing, so it reads as a letterform and an upward direction at once. The final segment of that arm carries the amber — the only place the accent appears in the identity by default.

Both the mark and the wordmark are drawn as vector paths, not set in a typeface. Nothing to license, nothing to re-outline, identical at every size on every device.

● PRIMARY HORIZONTAL LOCKUP — THE DEFAULT

Variants

● STACKED

● MARK ONLY

● WORDMARK

● ONE COLOUR

VARIANT	USE IT FOR
lockup	Website header, van livery, invoices, email signature, business cards. The default.
stacked	Square and portrait formats — social profiles, flyers, shop stickers, A-boards.
mark	Where VEYRO is already named nearby: favicons, avatars, watermarks.
wordmark	Rare — only when the mark appears separately on the same layout.
mono	One-colour reproduction: embroidery on a polo shirt, engraving, foil, single-colour print.
app-icon / avatar	Platforms supplying their own container — Facebook, Instagram, app stores.

Naming note: **on-light** files are navy and go on cream or white; **on-dark** files are cream and go on navy.

Clear space & minimum size

Keep clear space on all four sides equal to the **full height of the mark**. Nothing enters it — no text, no rules, no image edges, no other logos.

CONTEXT	MINIMUM WIDTH
Lockup, screen	120px
Lockup, print	32mm
Mark, screen	24px — below this use the solid app-icon
Mark, print	8mm

Misuse

DO

- Use the supplied SVGs, unmodified
- Place on flat cream, white or navy
- Switch to **mono** when only one colour is available
- Scale proportionally, from the corner

DON'T

- Recolour the mark or move the amber accent
- Rotate, skew, stretch, outline or add effects
- Add a drop shadow, glow, gradient or container of your own
- Re-set the wordmark in a font or change its letterspacing
- Place it over a busy photo without a plain panel behind it
- Rebuild it by hand — always use the source files

Palette

Warm cream, deep navy, one amber accent. Cream instead of white is the single most important choice here — it is what stops the brand feeling clinical and expensive.

Cream #FBF7F0 rgb(251, 247, 240) C0 M2 Y4 K2	Navy #13223A rgb(19, 34, 58) C67 M41 Y0 K77	Amber #D9822B rgb(217, 130, 43) C0 M40 Y80 K15
--	---	--

Supporting tones

Cream 2 #F5EFE3	Cream 3 #EBE2D2	Line #E2D8C6	Navy 2 #1D3253
Muted #4C5F7D	Faint #566A88	Amber ink #8F5210	Amber hi #F2A64B

The one rule that matters

Amber is a background colour, not a text colour. At 2.74:1 on cream it fails accessibility for text. For amber-looking text and links use **Amber ink** (#8F5210), which passes at 5.81:1. Text sitting *on* an amber button is always **Navy** — cream on amber fails at 2.74:1.

Contrast, measured

FOREGROUND	BACKGROUND	RATIO	VERDICT
Navy	Cream	14.92 : 1	AAA — body and headings
Muted	Cream	6.07 : 1	AA — secondary copy
Faint	Cream	5.16 : 1	AA — labels, captions
Faint	Cream 2	4.81 : 1	AA, but close — do not lighten Faint
Amber ink	Cream	5.81 : 1	AA — links and accent text
Navy	Amber	5.45 : 1	AA — the primary button
Cream	Navy	14.92 : 1	AAA — the footer
Amber	Cream	2.74 : 1	FAILS — backgrounds and large shapes only
Cream	Amber	2.74 : 1	FAILS — never white text on amber
Line	Cream	1.32 : 1	Borders only — never text

CMYK values are a conversion starting point, not a print spec. Confirm with your printer and ask for a proof — amber shifts noticeably on uncoated stock. For rich black in print use C60 M40 Y40 K100 rather than the navy screen value.

Two families

A characterful grotesque for headings and a quiet, highly legible sans for everything else. Both are open source and free for commercial use, with no licence to track.

● DISPLAY — BRICOLAGE GROTESQUE

Are you there?

Headings only, weight 600. Tracking -0.028em , leading 1.02. It has personality without being a novelty face — which is exactly the register this brand needs. Never below 18px, never for body copy.

● BODY & UI — PUBLIC SANS

The quick brown fox jumps over the lazy dog. 0123456789 £99

All body copy, buttons, navigation, labels and form fields. Weights 400, 500 and 600. Body leading 1.65, measure capped at 66 characters. **Minimum 16px on mobile** — below that iOS zooms the viewport whenever a field is focused.

Public Sans was drawn for US government services, which is the highest compliment available here: it is designed to be read by everyone, on anything, without being noticed.

Scale

ROLE	FAMILY	SIZE	LEADING
Hero	Display	<code>clamp(2.5rem, 8vw, 6rem)</code>	1.02
Section heading	Display	<code>clamp(2rem, 5.2vw, 3.75rem)</code>	1.02
Sub heading	Display	<code>clamp(1.55rem, 3.2vw, 2.4rem)</code>	1.1
Lede	Sans	<code>17–19px</code>	1.7
Body	Sans	<code>16px</code>	1.65
Small	Sans	<code>14px</code>	1.6
Eyebrow	Sans 600	<code>12px</code> , tracking 0.14em, uppercase	1.4

The amber marker sweep behind a key word is a signature device. Use it **once per page**, on the single word the whole headline turns on. Two of them and it stops meaning anything.

How things move

Motion here is quiet and single-axis. Things arrive from below and settle. Nothing bounces, nothing spins except a loading indicator, and nothing moves that the reader did not cause.

DEVICE	BEHAVIOUR
Section reveal	850ms, opacity 0→1 with a 24px rise, as it enters view
Headline reveal	1050ms per line, masked, sliding up with an 85ms stagger
Marker sweep	Amber grows left-to-right behind the key word, 1.1s, delayed 350ms so the line lands first
Search demo	Types the query, drops in three competitors, then reveals “you” below. Plays once.
List stagger	Tick items in 60ms increments, eight steps maximum
Card lift	4px rise, soft shadow, amber border on hover
Scroll progress	Amber bar across the top, native CSS scroll timeline
Sticky mobile bar	Slides up past 600px scroll — Call and Get a quote
Easing	<code>cubic-bezier(0.16, 1, 0.3, 1)</code> for entrances — fast out, long settle
Animated properties	<code>transform</code> and <code>opacity</code> only — never width, height, top or left

DO

- Animate one or two things per screen
- Reveal each element once, then leave it alone
- Honour `prefers-reduced-motion` everywhere
- Follow the reading order — top to bottom

DON'T

- Hijack the scroll or fight the reader's input
- Loop anything decorative
- Shift layout on hover
- Put content behind an animation someone has to wait out

Motion sensitivity is a genuine accessibility need, not a preference to design around. Under `prefers-reduced-motion`: **reduce** every animation resolves instantly to its finished state — nothing is hidden and nothing is lost.

How VEYRO writes

Like a capable person explaining something over a counter. Short sentences, concrete claims, British spelling, first person singular — it is one person, and pretending otherwise is the fastest way to lose the trust the whole business rests on.

SOUNDS LIKE VEYRO

- “Your customers are Googling you. Are you there?”
- “It’s about the price of two haircuts a month.”
- “You do nothing. I build it, I run it, you carry on cutting hair.”
- “You’ll always be told the number before you agree to anything.”

DOESN'T

- “We leverage bespoke digital solutions.”
- “Our team of experts...” (there is no team)
- “Award-winning, industry-leading, world-class.”
- “Take your brand to the next level! 🚀”

CONVENTION	STANDARD
Person	First person singular — I, me, my. Never “we”.
Spelling	British — organise, colour, enquiry, licence (noun)
Studio name	VEYRO in full capitals, always
Prices	Always shown. £99, £199, £299 — no “from”, no “POA”
Dashes	Em dash with spaces — like this
Emoji	Never on the website. Fine in a Facebook DM.
Exclamation marks	Effectively never
Claims	Only what can be honoured. No client counts, no invented testimonials, until they are real.

Non-negotiable

A lot of the people buying from VEYRO are not confident with technology, and a fair number will be reading on an old phone with the text size turned up. This matters more here than it does for most brands.

REQUIREMENT	STANDARD
Text contrast	4.5:1 minimum for body, 3:1 for large text
Touch targets	44×44px minimum for anything tappable
Body text on mobile	16px minimum, no exceptions
Focus states	Visible 2px amber-ink ring, 3px offset, on every interactive element
Icons	SVG only. Icon-only buttons carry an <code>aria-label</code> .
Colour	Never the only way information is conveyed
Animation	Anything that conveys meaning also has a text equivalent
Reduced motion	Fully honoured — see section 05
Target	WCAG 2.2 AA across all pages

What's in the folder

All logo files are SVG — infinitely scalable, a few hundred bytes each, editable in any vector tool. Regenerate them all at any time with `node generate-logos.mjs`.

FILE	USE
<code>veyro-lockup-on-light.svg</code>	Primary — navy, for cream or white
<code>veyro-lockup-on-dark.svg</code>	Primary — cream, for navy
<code>veyro-stacked-on-light.svg</code>	Square and portrait formats, light
<code>veyro-stacked-on-dark.svg</code>	Square and portrait formats, dark
<code>veyro-mark-on-light.svg</code>	Symbol alone, light
<code>veyro-mark-on-dark.svg</code>	Symbol alone, dark
<code>veyro-wordmark-on-light.svg</code>	Wordmark alone, light
<code>veyro-wordmark-on-dark.svg</code>	Wordmark alone, dark
<code>veyro-lockup-mono-black.svg</code>	One colour, dark on light
<code>veyro-lockup-mono-white.svg</code>	One colour, light on dark
<code>veyro-mark-mono-black.svg</code>	One colour symbol, dark
<code>veyro-mark-mono-white.svg</code>	One colour symbol, light
<code>veyro-app-icon.svg</code>	App stores, home screens (20% corner radius)
<code>veyro-favicon.svg</code>	Browser tab (12% corner radius)
<code>veyro-avatar-round.svg</code>	Facebook and Instagram profiles (circular)

Need a PNG or PDF — for a printer, a sign-writer, or Facebook? Open any SVG in Figma, Illustrator or Inkscape and export at the size you need. Because these are vectors there is no such thing as exporting them too large.

VEYRO Brand Guidelines, version 2.0 — internal reference.

The colour, type and motion values here match the website design tokens in `app/globals.css` exactly. If you change one, change both.
